

2N Mobility Extension

the perfectly mobile solution

Now mobile users can answer their PBX extension number even when they're away from the office.

Seamless communication – cost-effective functionality

The 2N Mobility Extension (ME), exclusively available from Wavelink, connects mobile phones to any PBX as standard office extensions. This instantly opens up enhanced communication opportunities.

Calls to a PBX extension are simultaneously routed to a mobile, then connected to the phone which answers first. Mobile users can access all of their company's PBX functions, such as call forwarding, conference call and voicemail.

- ME connects mobile phones to a PBX as standard office extensions.
- Incoming calls are simultaneously routed to a PBX extension and a mobile.
- Staff are easier to reach, even if frequently out of the office.
- Standard PBX functions become accessible from a mobile phone.
- Customers and Colleagues can communicate with mobile users more effectively and efficiently.
- Significant savings on international calls from GSM mobiles are made possible by routing via the PBX.
- Cost-effective replacement for a multi-cell DECT system.

The benefits are compelling. Colleagues need only use PBX extension numbers to reach one another, even if someone is out of the office. Contact from customers and suppliers is simplified and the ME's transparent operation means callers need not know they are speaking via the ME to a mobile.

If users need to make international calls from their mobile, the GSM gateway option enables them to be routed at the lowest possible cost, bringing significant savings.

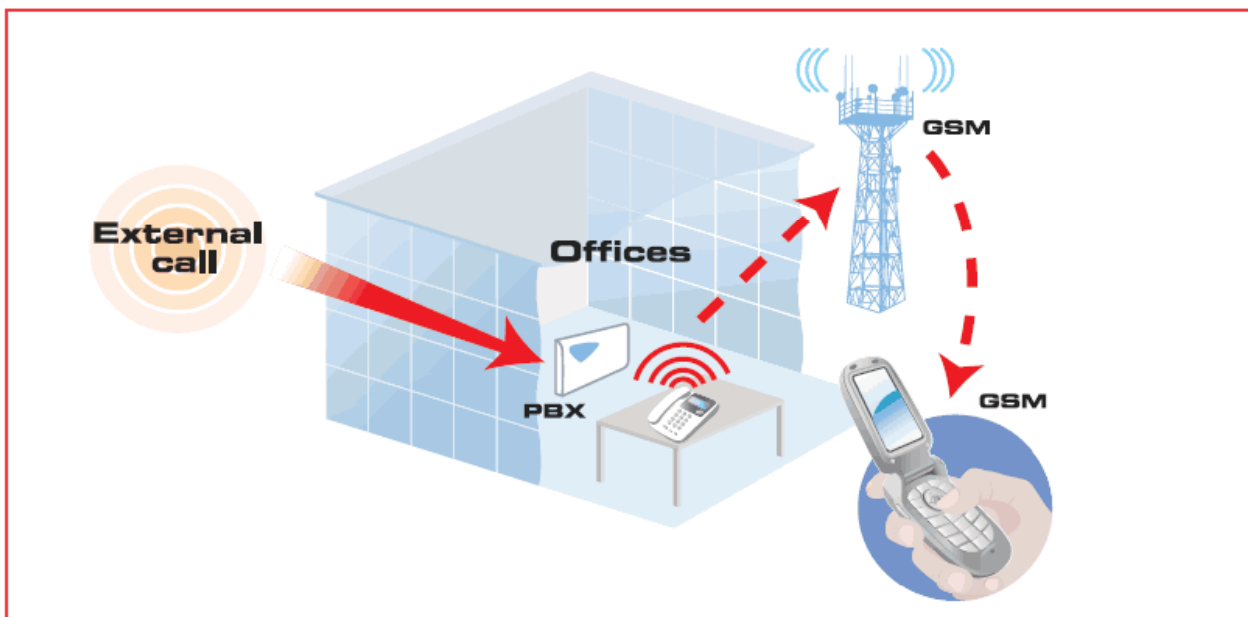

Applications

Complete mobility solution

With 2N Mobility Extension, calls to an employee's desk telephone extension are simultaneously routed to their mobile, with no call or divert charges. When one telephone extension is answered the other extension will stop ringing.

Total flexibility

When business demands mobility not simply around the desk or within the office complex but for remote working and international travel, ME is the perfect solution. A mobile acting as an internal extension lowers calling costs, increases availability and provides seamless access to PBX services.

Mobility Extension specification

- Scalable, upgradable system
- 1-8 GSM channels
- Up to 48 users per system
- Mobility for analogue, ISDN, VoIP and proprietary extensions
- Call forwarding support
- Optional fixed cellular terminal functionality
